

## KraneShares MSCI China Clean Technology Index ETF\*

### Investment Strategy:

KGRN seeks to track the performance of the MSCI China IMI Environment 10/40 Index. The Index is comprised of securities that derive at least 50% of their revenues from environmentally beneficial products and services. The Index is based on five key Clean Technology environmental themes: Alternative Energy, Sustainable Water, Green Building, Pollution Prevention and Energy Efficiency. The Index aims to serve as a benchmark for investors seeking exposure to Chinese companies that focus on contributing to a more environmentally sustainable economy by making efficient use of scarce natural resources or by mitigating the impact of environmental degradation. Constituent selection is based on data from MSCI Environment, Social, and Governance (ESG).

### China's Environmental Protection Highlights:

- China is the world leader in total renewable energy capacity, at approximately 31% of total global capacity<sup>1</sup>
- China budgeted \$360 billion for renewable energy investments from 2017 to 2020<sup>2</sup> and plans to have renewable energy account for 35% of its electricity consumption by 2030<sup>3</sup>
- Meeting these standards would create as much new renewable energy capacity as the entire US electricity system<sup>4</sup>, and China would represent half of the world's green building floor space<sup>5</sup>
- China has a proven track record of achieving ambitious long term renewable energy goals set forth within The Five Year Plan, the government's vision for China's development over the next five years.<sup>6</sup>

### KGRN Features:

- Access to China's fast-growing environmental protection industry that has rapidly become the largest renewable energy market in the world<sup>1</sup>
- Exposure to companies that stand to benefit from China's increased focus and spending on clean energy technologies

\*\*ESG investing, as defined by MSCI, is the consideration of environmental, social, and corporate governance factors alongside financial factors in the investment decision making process. The MSCI ESG Rating is calculated as a direct mapping of ESG Quality Scores to letter rating categories (e.g. AAA = 8.6-10). The ESG Ratings range from leader (AAA, AA), average (A, BBB, BB) to laggard (B, CCC). The MSCI ESG Rating and ESG Quality Score for funds is calculated using the weighted average of the ESG scores of the fund holdings.

**Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting [www.kraneshares.com](http://www.kraneshares.com). Read the prospectus carefully before investing.**

**Risk Disclosures:**

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives. The Funds are subject to political, social or economic instability within China which may cause decline in value. Fluctuations in currency of foreign countries may have an adverse effect to domestic currency values. Emerging markets involve heightened risk related to the same factors as well as increase volatility and lower trading volume.

Narrowly focused investments typically exhibit higher volatility. To achieve its investment objective the Fund is dependent, in part, on the continuous availability of A Shares and the ability to obtain, if necessary, additional A Shares quota. If a Fund is unable to obtain sufficient exposure to limited availability of A Share quota, the Fund could seek exposure to the component securities of the Underlying Index by investment in other types of securities. The Fund may underperform other similar funds that do not consider conscious company/ESG guidelines when making investment decisions. The Fund is non-diversified.

Fund shares are bought and sold on an exchange at market price (not NAV) and are not individually redeemed from the Fund. However, shares may be redeemed at NAV directly by certain authorized broker-dealers (Authorized Participants) in very large creation/redemption units. The returns shown do not represent the returns you would receive if you traded shares at other times. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. Beginning 12/23/2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates the current NAV per share. Prior to that date, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time.
